

Food and Fiber Fields

Harvest the knowledge to feed our world and protect our natural resources

The Food and Fiber Fields will highlight the university's research commitment to feed a growing global population and to address continued depletion of natural resources. It will also give us the opportunity to showcase agricultural research, and demonstrate the latest technology in crops, plant materials and cultural practices.

Food and Fiber Fields

This living display will provide students and visitors the opportunity to see the primary agronomic crops of Texas at various stages of development. An interpretive system will accompany the planting to convey the importance of agriculture to the daily lives of Texans.

In such a large, diverse state, the types of crops that can be grown successfully are numerous. But there's still much to be learned about soil chemistry, crop production, weed science, environmental quality, and even entomology. All these and more affect what we can plant and how often we can plant it.

Students will work with the crops year 'round while visitors glean important information from the findings.

Plant the Seeds of Your Texas A&M Legacy

Your investment in The Gardens at Texas A&M University will breathe new life into the Aggie community and extend the reach of our exemplary university. Your support will make this special place a reality.

Include your name or that of a loved one as a permanent part of this initiative by funding a garden, the pavilion, a gathering space or other natural area.
